SUMMARY

Python Developer with 3+ years of backend experience and hands-on GenAI project work building RAG-based LLM applications. Experienced in OpenAI APIs, Pinecone vector retrieval, prompt engineering, AI agent workflows, and structured output generation. Strong production background in Django, DRF, REST APIs, PostgreSQL, Redis, Docker, and AWS, with fintech experience in API integrations, compliance workflows, and scalable system delivery.

EXPERIENCE

TalentBridge

Software Developer

Remote, India

Jun 2026 – Present

- Develop and maintain features for a multi-tenant Vendor Management System (VMS) using Django 5.1, Django REST Framework, SvelteKit 2, JavaScript, and PostgreSQL.
- Built and integrated REST APIs across 4 core modules: candidate management, vendor operations, document processing, and workflow automation.
- Configured Docker-based environments, Redis caching, and Celery background jobs to improve application scalability and response performance.
- Integrated MinIO, Mailpit, ClamAV, and document conversion services for document ingestion, processing, and production support.

Moneybloom

Software Developer

Hyderabad, India

Jan 2023 – Jun 2026

- Led end-to-end migration of NSE integration services from XML to JSON-based APIs, standardizing schemas and improving maintainability across production fintech workflows.
- Streamlined transaction processing, client onboarding, and reporting modules for a live investment platform serving daily financial operations.
- Enhanced 5 production financial reports, including Online Transaction Reports, Account Statements, Redeemed Funds Reports, SIP Reports, and AUM Reconciliation Reports, improving reporting accuracy and operational visibility.
- Implemented server monitoring, transaction mismatch alerts, and operational tracking to improve production stability and faster issue detection.
- Integrated 5 MF Central API modules, including CAS, Authentication, Bank Updates, IDCW changes, and Folio Consolidation, with regulatory validations and investment restrictions.

PROJECTS

MediSure Regulatory Intelligence Assistant | OpenAI, Pinecone, RAG, n8n, AI Agents

- Built an agentic GenAI research assistant that accepts natural language queries and monitors 4 global health authorities (FDA, EMA, CDSCO, WHO) for regulations, safety alerts, recalls, and post-market surveillance updates.
- Implemented a RAG pipeline using OpenAI embeddings and Pinecone vector search over regulatory PDFs, with document chunking, semantic retrieval, and metadata-based source traceability.
- Designed a multi-step agent workflow combining vector retrieval, web search, and conversational memory to synthesize multi-source compliance findings before LLM response generation.
- Reduced hallucinations through retrieval grounding, constrained prompting, LLM-based relevance evaluation, human-in-the-loop review, and structured output formatting for standardized regulatory briefings.
- Orchestrated the end-to-end implementation using n8n integrated with OpenAI and Pinecone APIs for repeatable compliance research workflows.

SKILLS

GenAI & LLM: OpenAI API, RAG, Pinecone, Vector Databases, Embeddings, Prompt Engineering, AI Agents, Structured Output, n8n

Core Keywords: Python, GenAI, RAG, LLM Applications, Django, DRF, REST APIs, PostgreSQL, Redis, Docker, AWS, API Integration

Languages: Python, JavaScript, Bash (Basic), SQL

Backend: Django REST Framework, REST API Development, Celery, RabbitMQ, JWT, OAuth, Authentication Systems

Databases: PostgreSQL, MySQL, MSSQL, Redis

DevOps & Cloud: Docker, Linux, Nginx, SSL, AWS Lambda, AWS S3, Git, GitHub

Tools & Testing: Postman, API Testing, pytest, Debugging, UAT Support, Pandas

EDUCATION

IIIT Nuzvid

B.Tech in Computer Science | GPA: 8.5/10

Nuzvid, India

July 2019 – June 2023
